

# Reflections from Mont Blanc

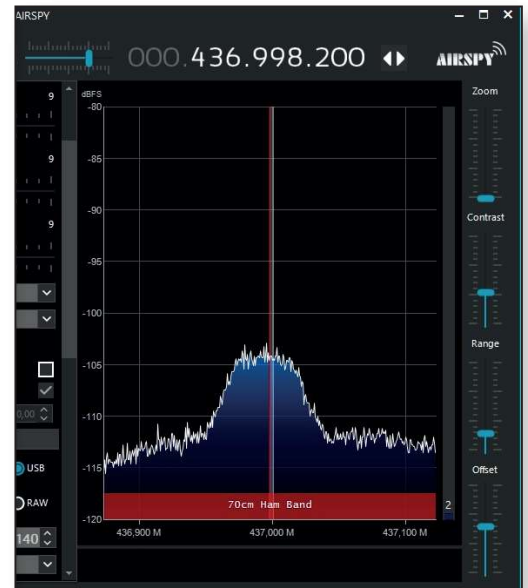

Reported by Dave Crump, G8GKQ

Michel, HB9AFO, reports that on 3 August he achieved a 10 GHz 66 kS DVB-S2 contact with F9ZG/P using a passive reflection from Mont Blanc.

Michel's QTH is 83 km from Mont Blanc over an unobstructed path as shown in the path plot below.

Rolf, F9ZG, was at Plateau de La Verrerie in JN16VB, 239 km from the mountain and was running 5W to a 120 cm dish.

The received signal can be seen below – very impressive for a 322 km total path length. 🗣️

Thanks to Michel for the information.
