

Reflections from Mont Blanc

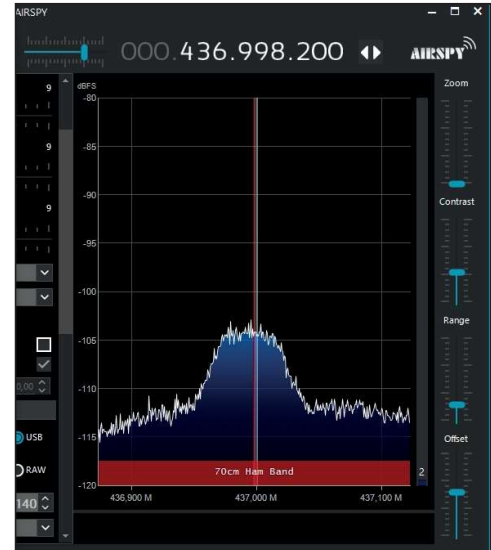

Reported by Dave Crump, G8GKQ

Michel, HB9AFO, reports that on 3 August he achieved a 10 GHz 66 kS DVB-S2 contact with F9ZG/P using a passive reflection from Mont Blanc.

Rolf, F9ZG, was at Plateau de La Verrerie in JN16VB, 239 km from the mountain and was running 5W to a 120 cm dish.

Michel's QTH is 83 km from Mont Blanc over an unobstructed path as shown in the path plot below.

The received signal can be seen below – very impressive for a 322 km total path length. 📡

Thanks to Michel for the information.
