Superbird-8 / DSN-1	2014	2018	Planned 2018	Ariane 5 ECA	N/A
Es'hail 2	2014	2018	Planned 2018	Falcon 9 Full Thrust	3,000 kg (6,600 lb)

DS-2000 Platform Overview

- **Life:** 15+ yrs
- **Maximum Launch mass:** ~3,000 kg (3 – 5 tons class)
- **Launch Vehicle Compatibility:** Ariane-5, Proton Breeze M, Atlas, Falcon 9, H-IIA
- **Payload Heritage:** L, S, C, X, Ku and Ka frequency bands, 72 transponders (nominal)
- **EPS:** Electric Power Subsystem
  100v regulated bus, 12kW in sunlit and eclipse in maximum, automatic battery operation, 100-175Ah Li-Ion battery
- **SCS:** Satellite Control Subsystem
  Data handling of command/telemetry, satellite House-Keeping (battery, heater). MIL-STD-1553B processor and 64bit MPU (or HR5000) applied.
- **SPS:** Solar Power Subsystem
  12-13 kW total power generation (GaAs cells).
- **TC&R**: Telemetry Command and Ranging
  Maximum 4 command telemetry units. Standard bit rate 7.68 kbps for TLM, 500 bps for CMD. TLM, CMD and RNG operated simultaneously. Auto/variable heater control.
- **BPS:** Bi-Propellant Subsystem
  Fuel (MMH) and Oxygen (MON-3) Bipropellant, 1 Apogee Kick Motor + 12 Thrusters, Ion engine available on request.
- **AOCS:** Attitude and Orbit Control Subsystem
  Uses 4-skewed reaction wheel; standard highly accurate attitude control by with 0.03deg for three axis.

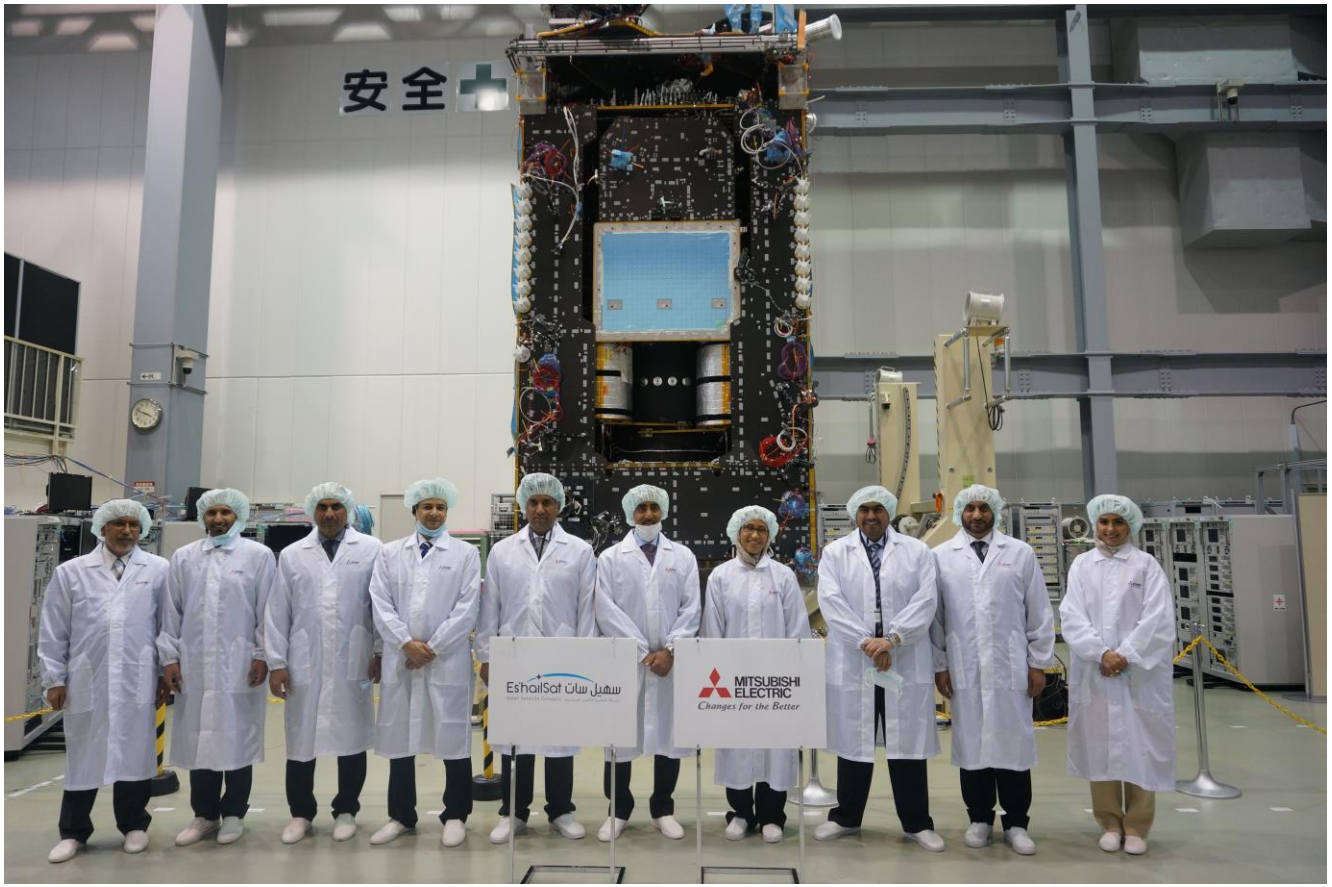
Es'hail-2 status

Es'hail-2 successfully passed critical design review (CDR)

Environmental testing includes:

- Thermal vacuum
- Vibration
- …

Launch is planned for 2018 with SpaceX (Falcon 9) from Cape Canaveral.



Executives from Qatar's Es'hailSat and Japan's Mitsubishi Electric Space Systems (MELCO) in Kamakura, outside of Tokyo, Japan, to observe the vacuum chamber test of Es'hail-2. Photograph courtesy of Es'hailSat, June 2016.

The International Amateur Radio Union

Since 1925, the Federation of National Amateur Radio Societies
Representing the Interests of Two-Way Amateur Radio Communication

IARU Amateur Satellite Frequency Coordination

Back to List of Sats formally submitted

Es'hail-2	**Updated: 30 May 2018**		**Responsible Operator**	**Majid AlNaimi A71A**
Supporting Organisation	Es'hailSat			
Contact Person	malnaimi@eshailsat.qa.nospam			

Headline Details: Es hail-2 is a commercial geostationary broadcasting satellite which will also provide the first amateur radio Phase 4 transponders. The satellite will be positioned at 26 degrees east. Es hail-2 will carry two transponders operating in the 2400 MHz and 10450 MHz bands. A 250kHz bandwidth linear transponder intended for conventional analogue operations and an 8 MHz bandwidth transponder for experimental digital modulation schemes and DVB amateur television.

Application Date:	28 May 2018	Freq coordination completed on	

The IARU Amateur Satellite Frequency Coordination Status pages are hosted by AMSAT-UK as a service to the world wide Amateur Satellite Community

“NB” Transponder (narrow band)

Linear Transponder for low power narrow bandwidth voice, morse and digital communication

- preferred modes: narrow band modes like SSB and CW, PSK

- 250 kHz allocated bandwidth

- non-inverting bent-pipe transponder

- Assumes 50 simultaneous 2-way carriers to serve 100 Users

- X-Band Downlink (SAT-TV dish):
  - 90 cm dishes in rainy areas at EOC like Brazil or Thailand
  - 60 cm around around coverage peak
  - 75 cm dishes at peak -2dB

- Downlink Polarisation on X-Band is Vertical !

- Uplink Polarisation on S-Band is RHCP
- Uplink transmitter 5-10W PEP (22.5 dBi antenna gain, 75cm dish)

“WB” Transponder (wide band)

Linear Transponder for Digital Amateur Television (DATV) and other highspeed data transmissions.

First DATV transponder in space!!

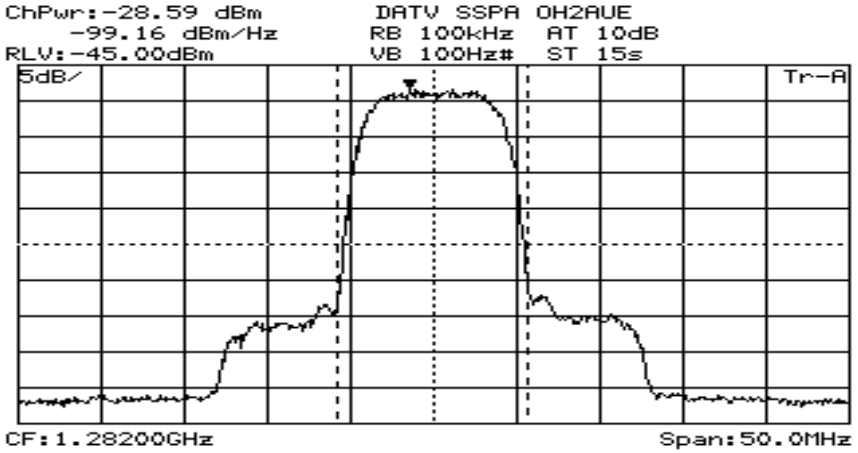
- 8 MHz bandwidth
- one or two DVB-S2 carrier in HD quality or more channels with SD or lower quality

- assumes S-Band Uplink peak EIRP of 53 dBW (100W PEP into 2.4m dish)

- X-Band Downlink (SAT-TV dish):
  - 90 cm dishes in rainy areas at EOC like Brazil or Thailand
  - 60 cm around around coverage peak
  - 75 cm dishes at peak -2dB

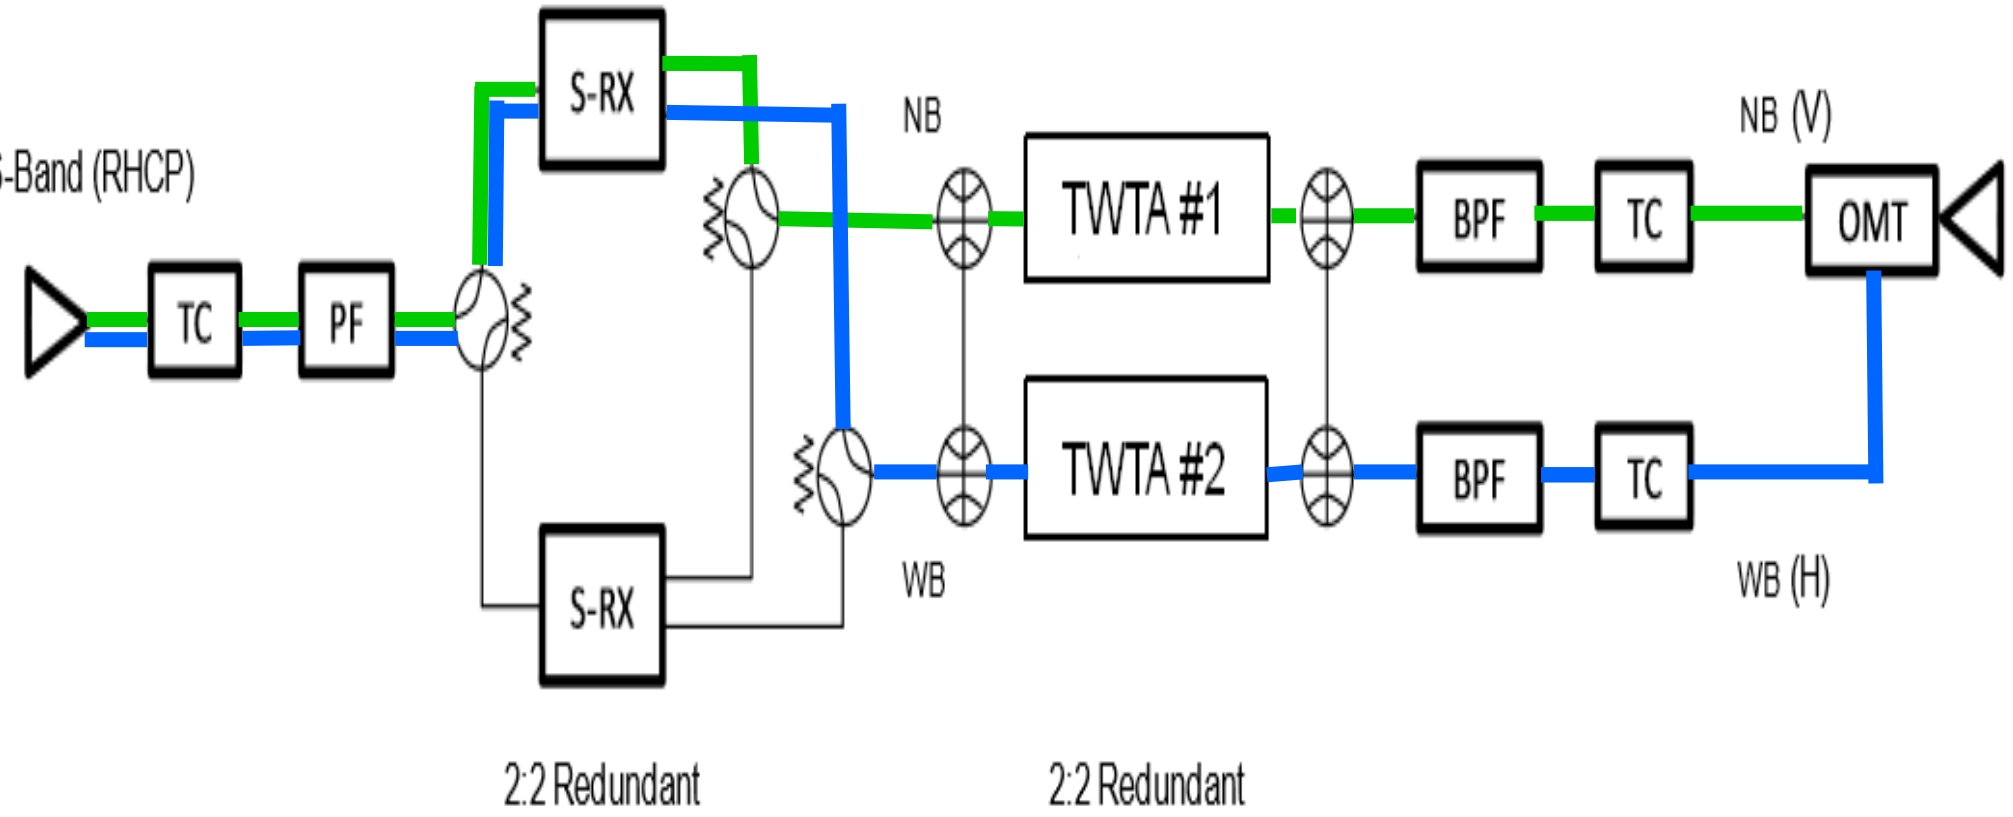
- Uplink Polarisation on S-Band is RHCP
- Downlink Polarisation on X-Band is Horizontal !

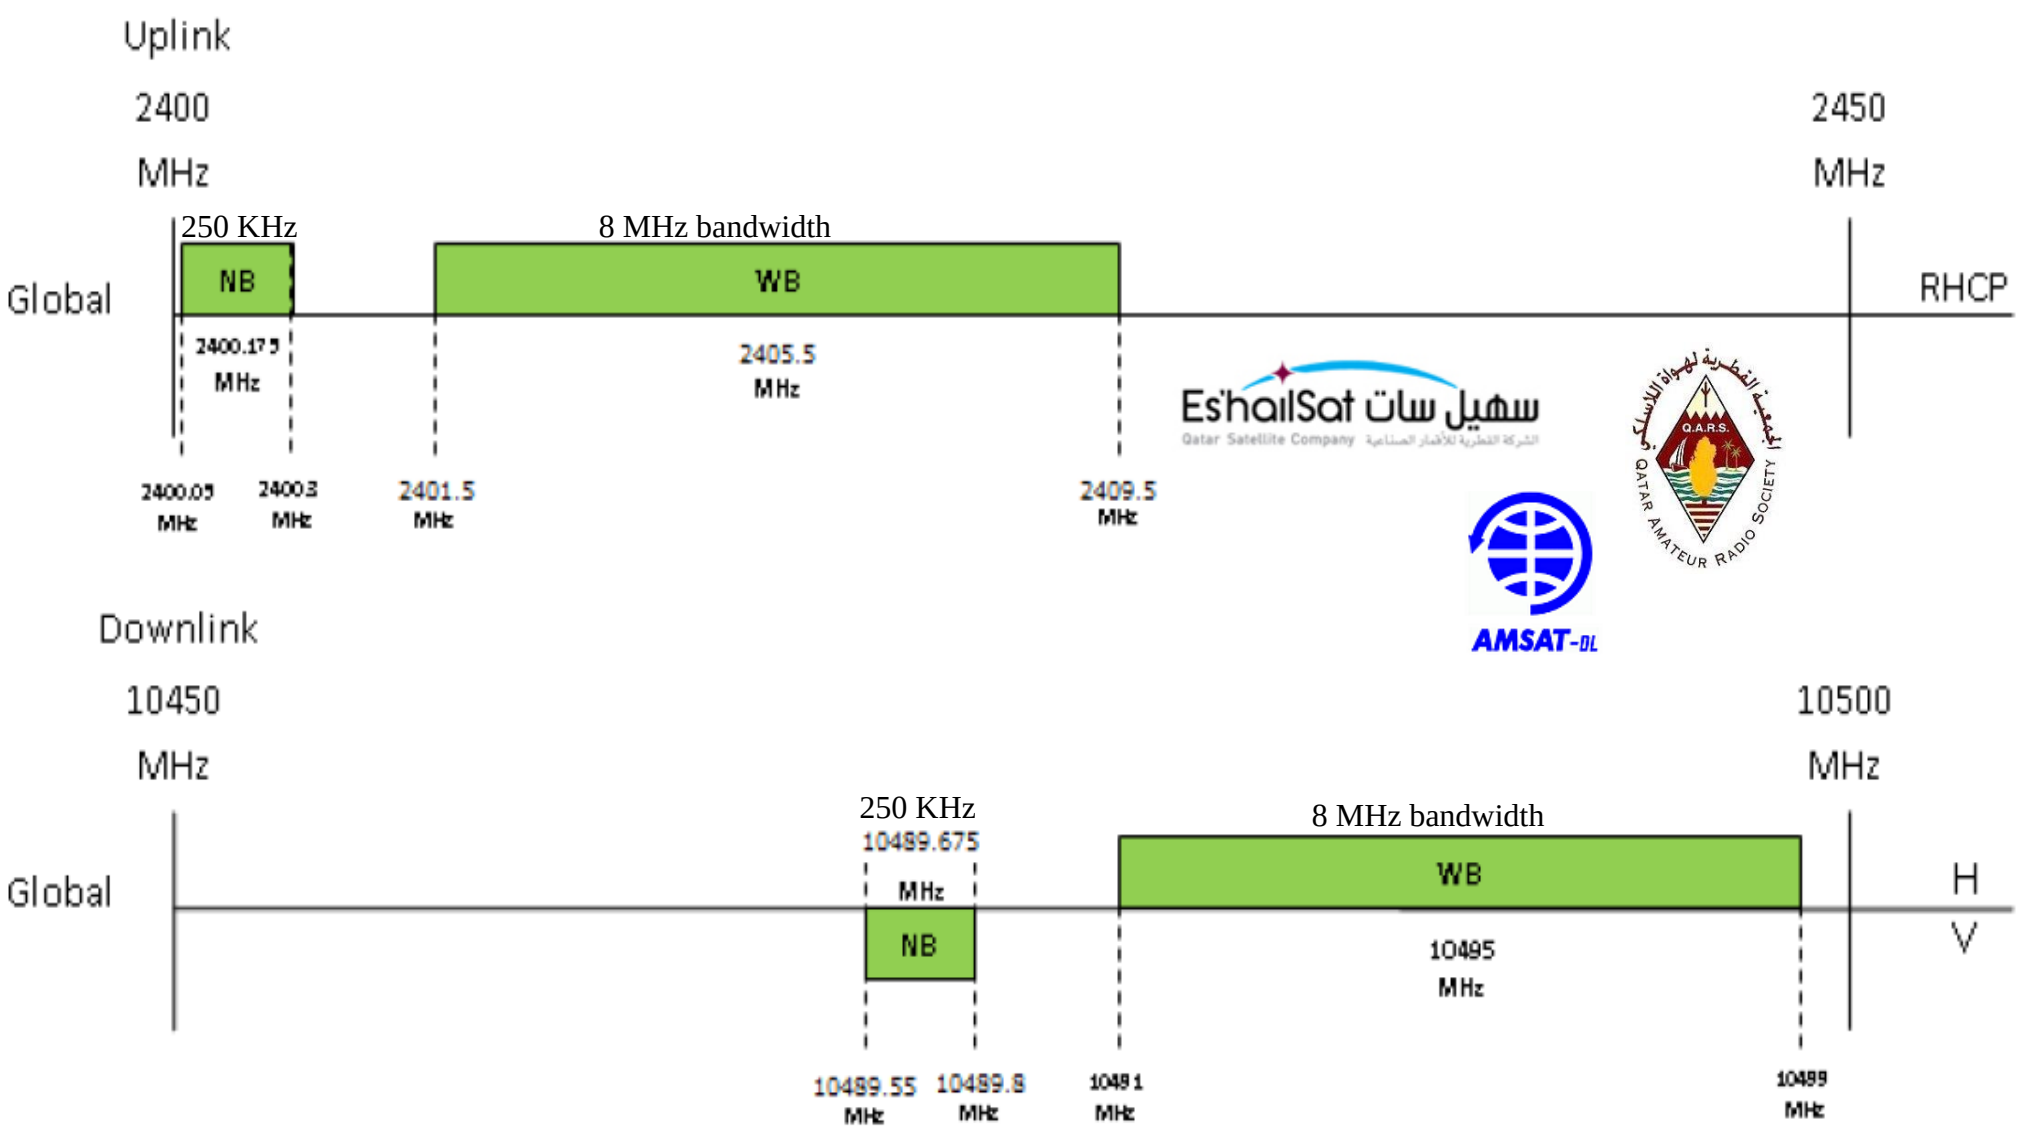
- DVB-S2 “beacon” from Qatar is planned with
  Live WebCam and promotional videos for
  Ham radio activities, visualisation, etc.



- RF Bandwidth = 1.33 x Symbol-Rate = 1.33 x 2.5 MSymbols/sec = 3.33 MHz signal

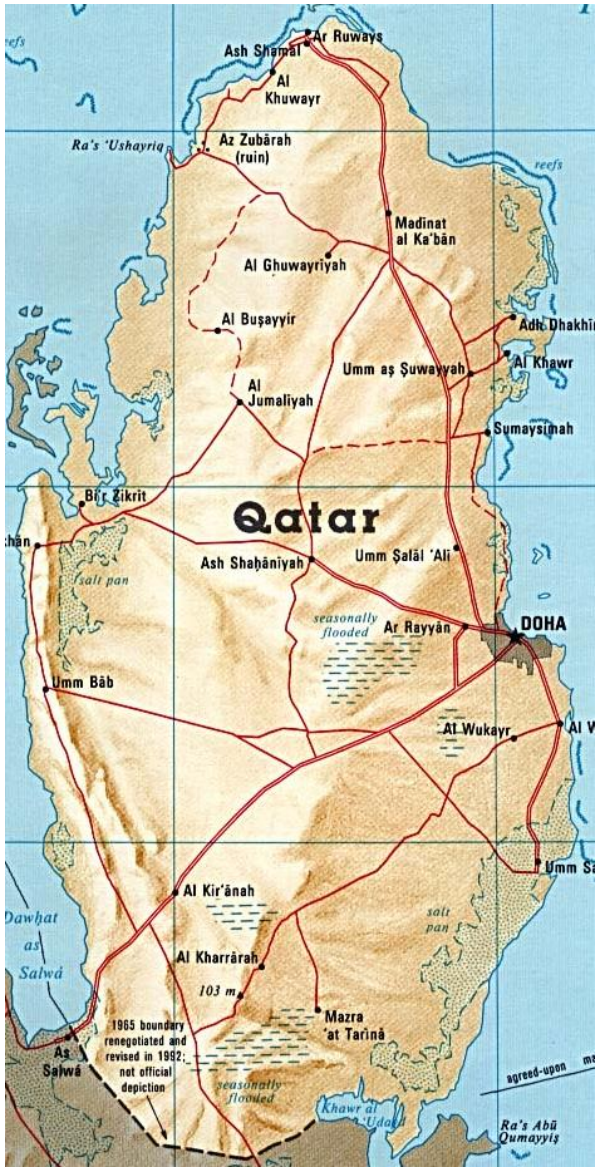
AMSAT Payload Block Diagram





Xpdr	U/L FREQUENCY (MHz)				D/L FREQUENCY (MHz)				LO	BW
No	Pol	Begin	Center	End	Pol	Begin	Center	End	(MHz)	(MHz)
NB	RHCP	2400.05	2400.175	2400.3	V	10489.55	10489.675	10489.8	8089.5	0.25
WB	RHCP	2401.5	2405.5	2409.5	H	10491	10495	10499	8089.5	8

Es'hailSat Satellite Control Center



AMSAT-DL HQ Bochum

- 3m antenna for 2.4 GHz Uplink with VE4MA septum feed
- 2.5m antenna for 10 GHz Downlink
- 20m dish available for emergency operations

AMSAT Ground Segment

Located at the Es'hailSat Satellite Control Center (SCC) near Doha in 'shelter' close to main Es'Hail 2 SCC uplink/downlink antennas

- unattended operations, but remote access to tweak LEILA-2 parameters shall be possible.

- 2.4 Meter dedicated Uplink antenna for AMSAT on S-Band

- In-Orbit-Verification and Monitoring of the AMSAT transponder with FFT passband (NB+WB) displays for quick assessment of situation.

- LEILA-2 (LEIstungs Limit Anzeige) will analyse passband of NB transponder and send Marker tones on all stations which use too much uplink power.

- LEILA-2 will generate pseudobeacon(s) and add them to the uplink signal (400 Bit/s PSK Telemetry with FEC). Telemetry will be derived from Es'hail-2 telementry.

- Hamradio shack equipped with SSB equipment for Voice and with DVB-S equipment for DATV transmissions directly from Doha.

- Backup station for LEILA will be located at QARS HQ and in Bochum at AMSAT-DL HQ

Pseudobeacon

* A beacon signal to enable users a signal reference (frequency and level) to orient themself

* A beacon generated on ground, not inside spacecraft

* Same flight-proven Phase 3 format, 400 bit/s BPSK telemetry with FEC

* Pseudobeacons at both ends of the Passband (transmissions outside are not permitted)

LEILA

LEILA is an german acronym for *"**LEIstungs Limit Anzeige**"*, which means: Power Limit Indicator.

The original concept of an hybrid analog/digital LEILA on AO-40 was developed by Dr. Karl Meinzer DJ4ZC and Dr. Matjaz Vidmar S53MV. It was the first time that such a system was used as part of an transponder with ***uncoordinated multiple access***.

LEILA on P4-A is ***ground-based !!***

- Siren marker (sufficient if operators work full duplex)
- Notch filter not possible

LEILA-2

redpitaya

- Analyzing the passband (FFT) and generating siren markers

- Encoding (FEC) and generation of pseudobeacon(s)

- Accessible via ethernet to tune settings and provide TLM data

- Up-/downconversion boards developed by AMSAT-DL/UK (DH2VA/G6LVB)

Advantech Wireless

What is DVB-S2 ?

- **New DVB standard for digitial satellite communications**
- **Meant to replace DVB-S & DVB-DSNG**
- **Much better spectral efficiency**
  - –Up to 30% bandwidth saving
  - –Up to 2.5 dB margin gain
- New features such as
  - –Variable and Adaptive Coding and Modulation
  - –Generic Mode (no transport stream overhead)
  - –Support of multiple streams on a single carrier
- So close to the Shannon limit that it could be the last DVB-S standard!

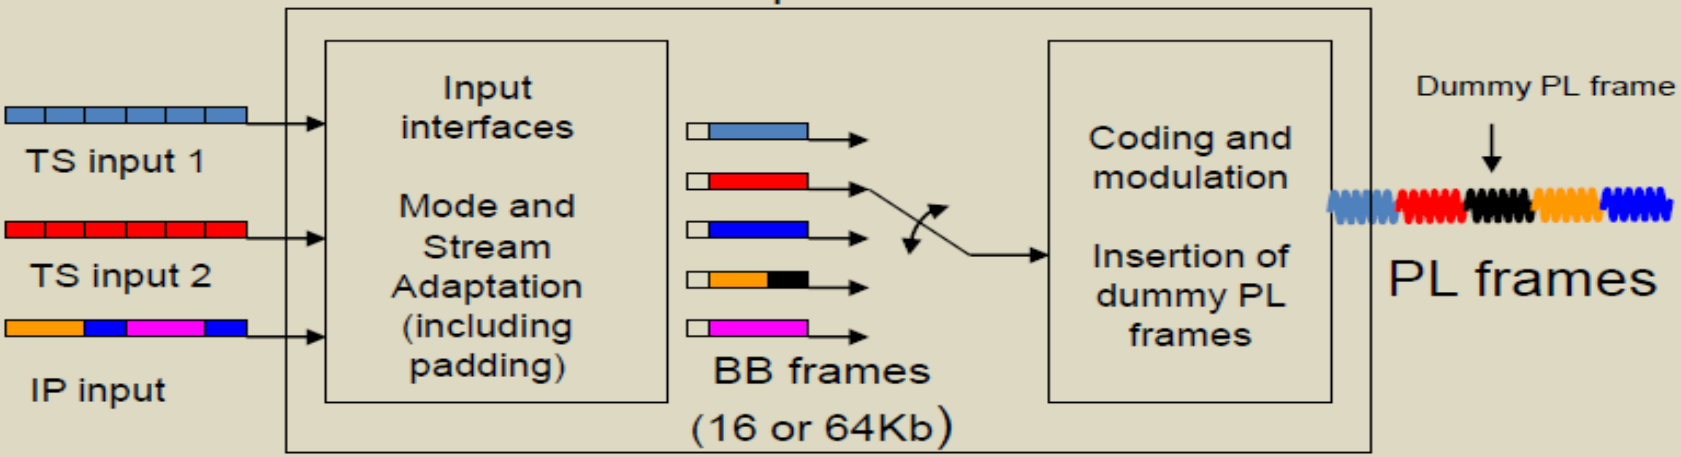
Advantech Wireless

Multiple streams on single carrier (CCM-VCM-ACM)

- A DVB-S2 modulator can have several physical or logical inputs:



- The data of each each input is processed in separated Base Band frames.
- The BB frames are time-multiplexed at the Physical Layer on the same carrier (no TS multiplexing)
- When no data is present the modulator can pad incomplete BB frames or insert dummy PL frames
- Demodulators can receive and decode individual streams independently from the other streams

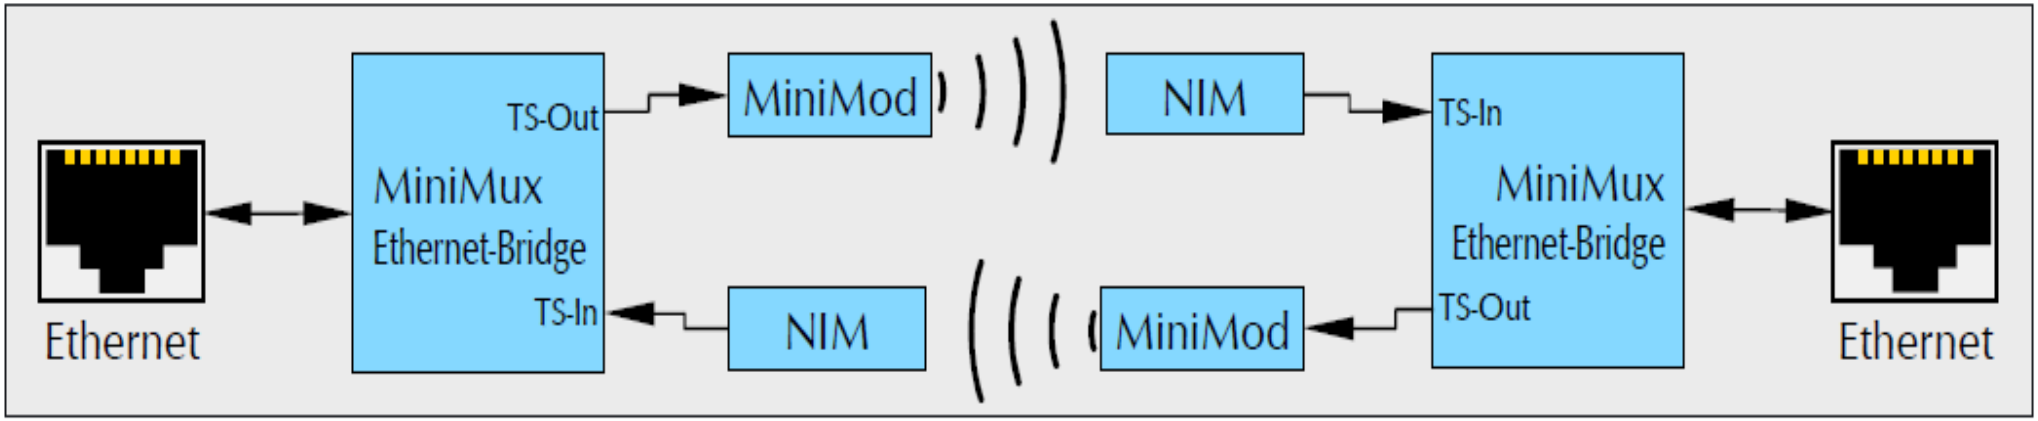
Ethernet-Bridge (Ethernet over DVB)

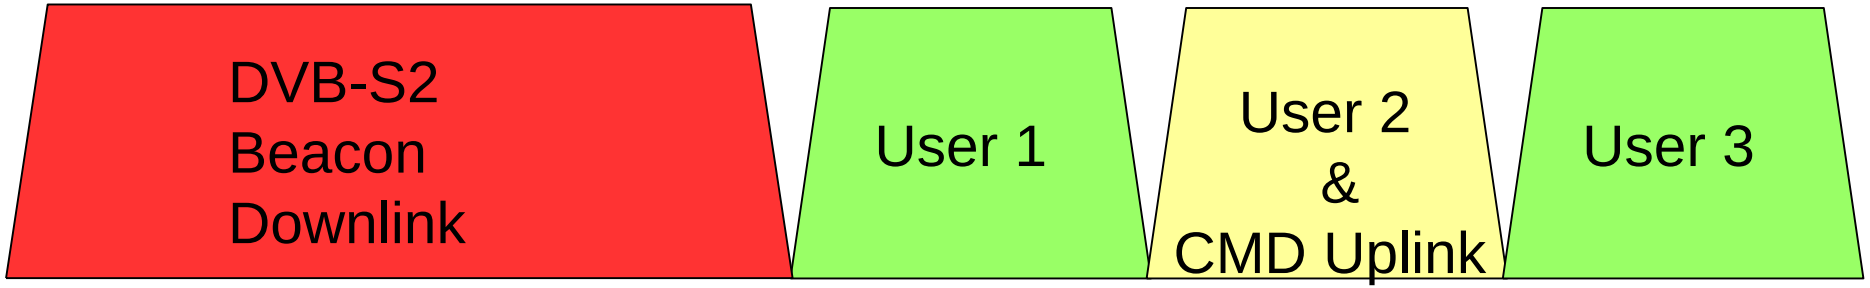


Unless only broadcast packets are sent, Ethernet bridging requires a full bidirectional link.

* Ethernet-Link
* Multiplexing with Video/Audio is possible
* Broadcast UDP
* full bidirectional link possible
* up to 30 Mbit/s

* 4 Uplinks possible when using Mux4 ??

DATV Bandplan (draft)



8 MHz

Beacon: 2403,000 MHz, 2.4 Msym (BW=3 MHz, DVB-S2)
User 1: 2405,350 MHz, 1.2 Msym (DVB-S2 or DVB-S)
User 2: 2407,000 MHz (see User 1 and Command Uplink)
User 3: 2408,700 MHz (see User 1)

User DVB-S2: 8PSK with 2/3 FEC, BW = 1.5 MHz
User DVB-S: QPSK with 7/8 FEC, BW = 1.62 MHz

Cmd Uplink: 1.2 Msym / 3.6 Msym, ~ 9,3 Mbit Data

BATC Involvement

- AMSAT-DL requested BATC help to manage and develop WB transponder use
- Hub of experimental DATV experience seems to centre on UK

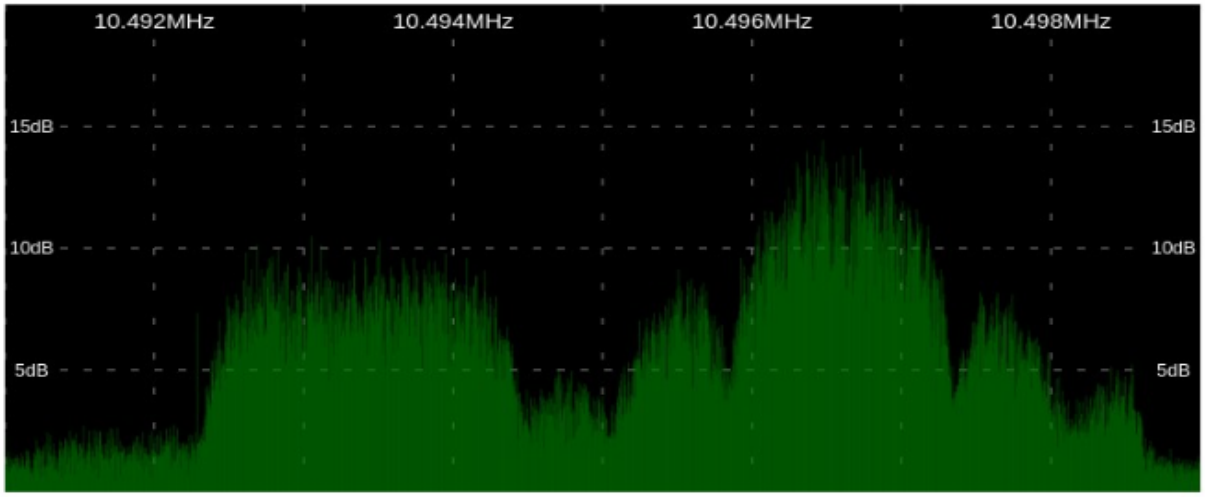
Choice and Co-ordination

- Easiest mode to start with is “standard” DVB-S QPSK DATV at 2 or 4 Msymbols/Sec 1/2 FEC
- But we should encourage and allow experimentation as well as the standard QSO operation
- DATV receivers need to know basic info about the signal they are receiving
  - Modulation, symbol rate and possibly FEC
- With so many modes and bandwidth combinations possible simultaneously we need co-ordination
- BATC is working with AMSAT-DL to produce a web-based monitor and analysis tool
  - Without it, it just won’t work!
  - Will include a chat window for questions

Proposed Web-based Spectrum Monitor

file:///home/phil/Projects/websocket-fft/index.html

Es'hailSat Spectrum Monitor



Users currently monitoring the spectrum: 1

23/07/2016

19:05 **Phil_M0DNY**
Hello!

19:05 **Phil_M0DNY**
*World!

Type '/nick your_name' and press enter to join.

Possible Frequency Plan

- A basic frequency / usage plan will help co-ordination - for example:
- 10,491 – 10,493 MHz = Reduced bandwidth TV
  - Up to 4 channels
- 10,493 – 10,495 MHz = IP based & experimental
  - Multiple channels depending on config
- 10,495 – 10,499 MHz = DVB channel
  - 2 * 2 MHz SD or 1 * 4 MHz HD
  - 1 * 8 MHz for super HD
- Usage can be varied on day to day basis

Uplink Power Budget

- Starting point is that an 8 MHz of DVB-S2 transmission will require 100W into a 2.4m dish

Power Budget (Watts)					
	8 MHz	4 MHz	2 MHz	1 MHz	0.5MHz
2.4m	100	50	25	12.5	6.25
1.7m	200	100	50	25	12.5
1.2m	400	200	100	50	25
0.85m	800	400	200	100	50

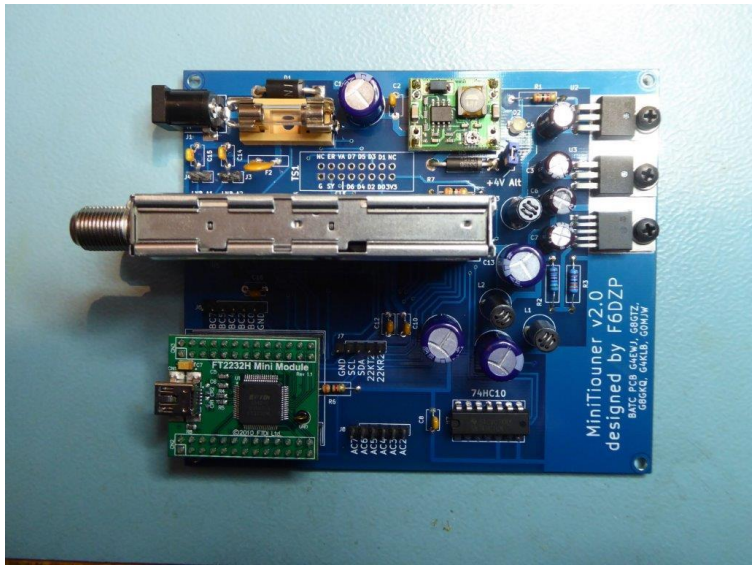
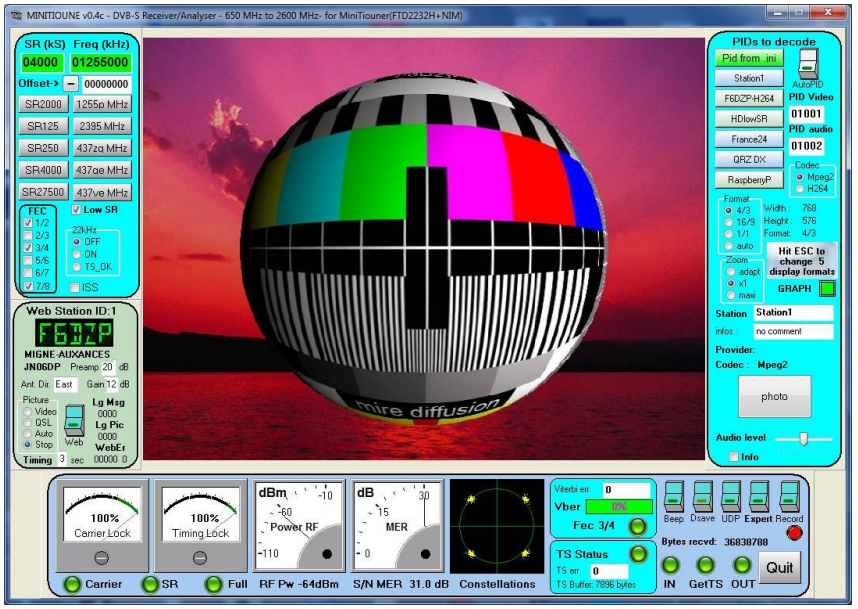
MiniTioune





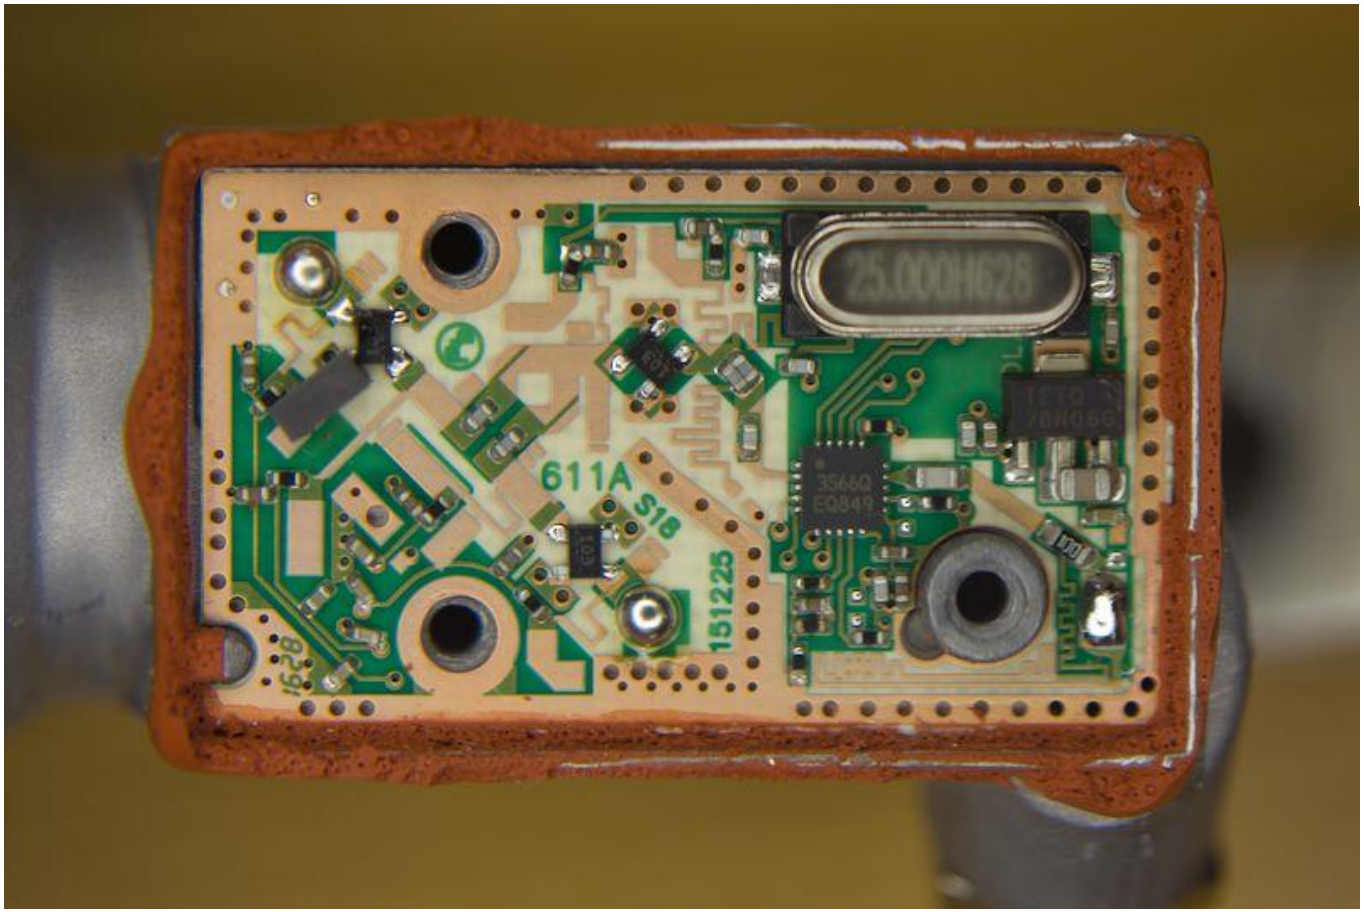
The MiniTioune receiver project, developed by Jean-Pierre F6DZP, interfaces via a standard USB 2.0 to a Windows PC running the MiniTioune software.

It will receive DVB-S QPSK and DVB-S2 QPSK, 8PSK, 16APSK, 32 APSK from broadcast and amateur TV transmissions with symbol rates (SR) from 30 Msymbols down to 120 Ksymbols per second. It is also capable of receiving Reduced Bandwidth (RB-TV) transmissions.

For more details: https://wiki.batc.org.uk/MiniTioune

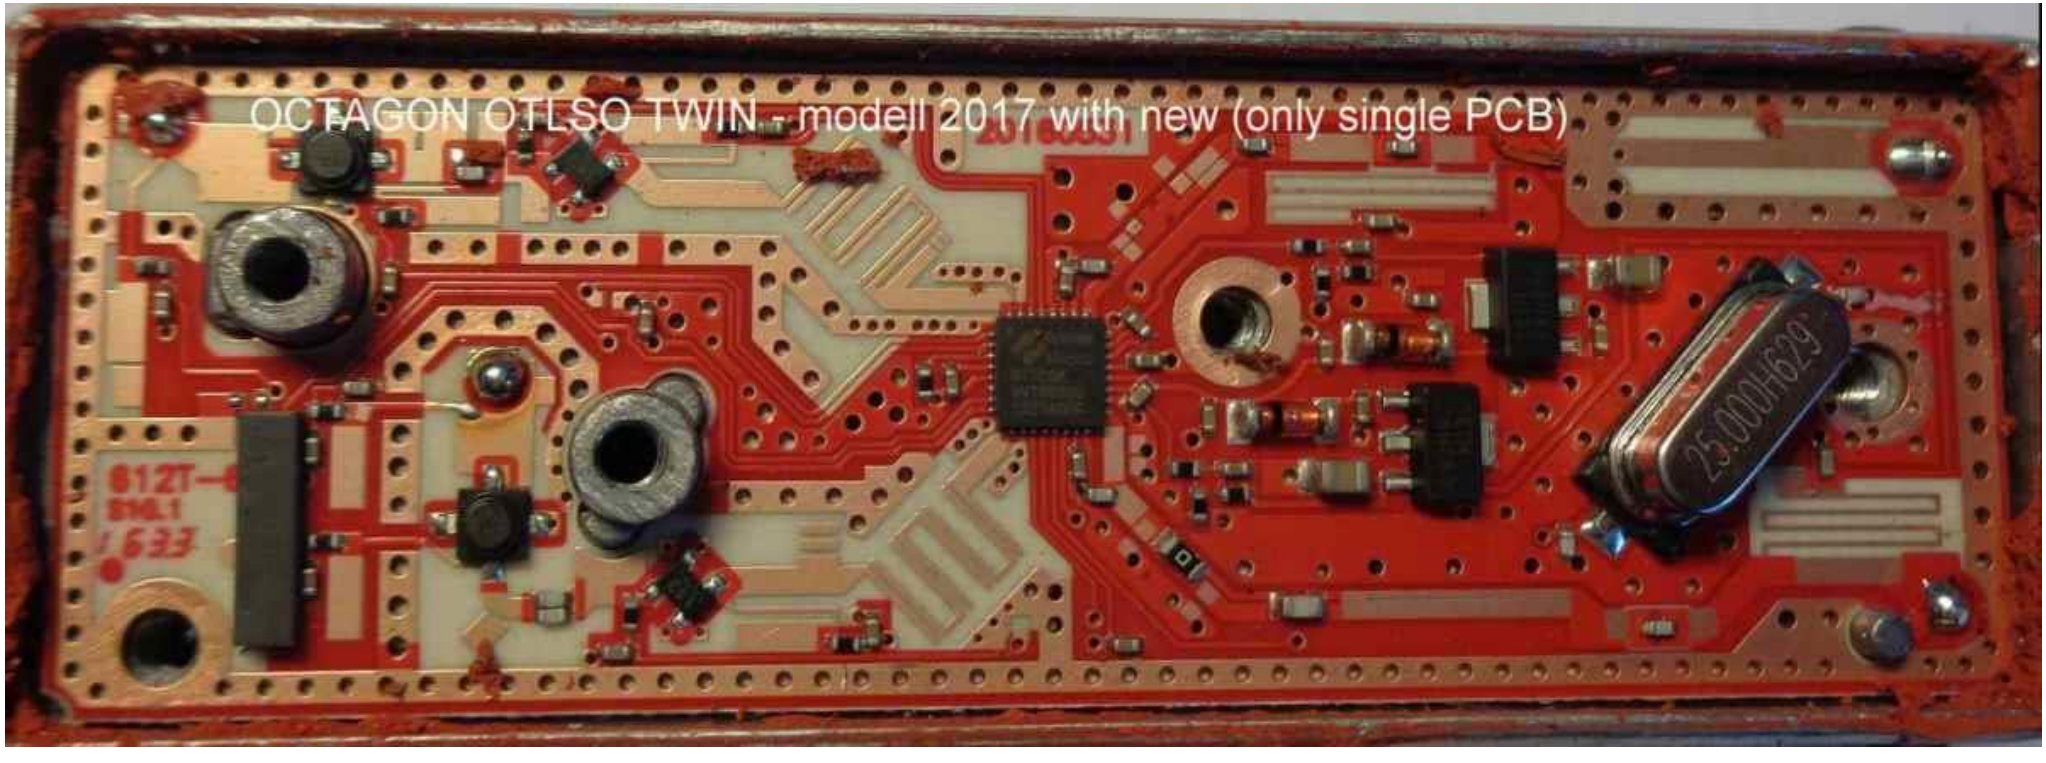
Octagon Optima Single LNB (OSLO) with PLL

- new (!) RDA3566 with 25 MHz Quarz
- PLL does not work with 24 MHz Quarz



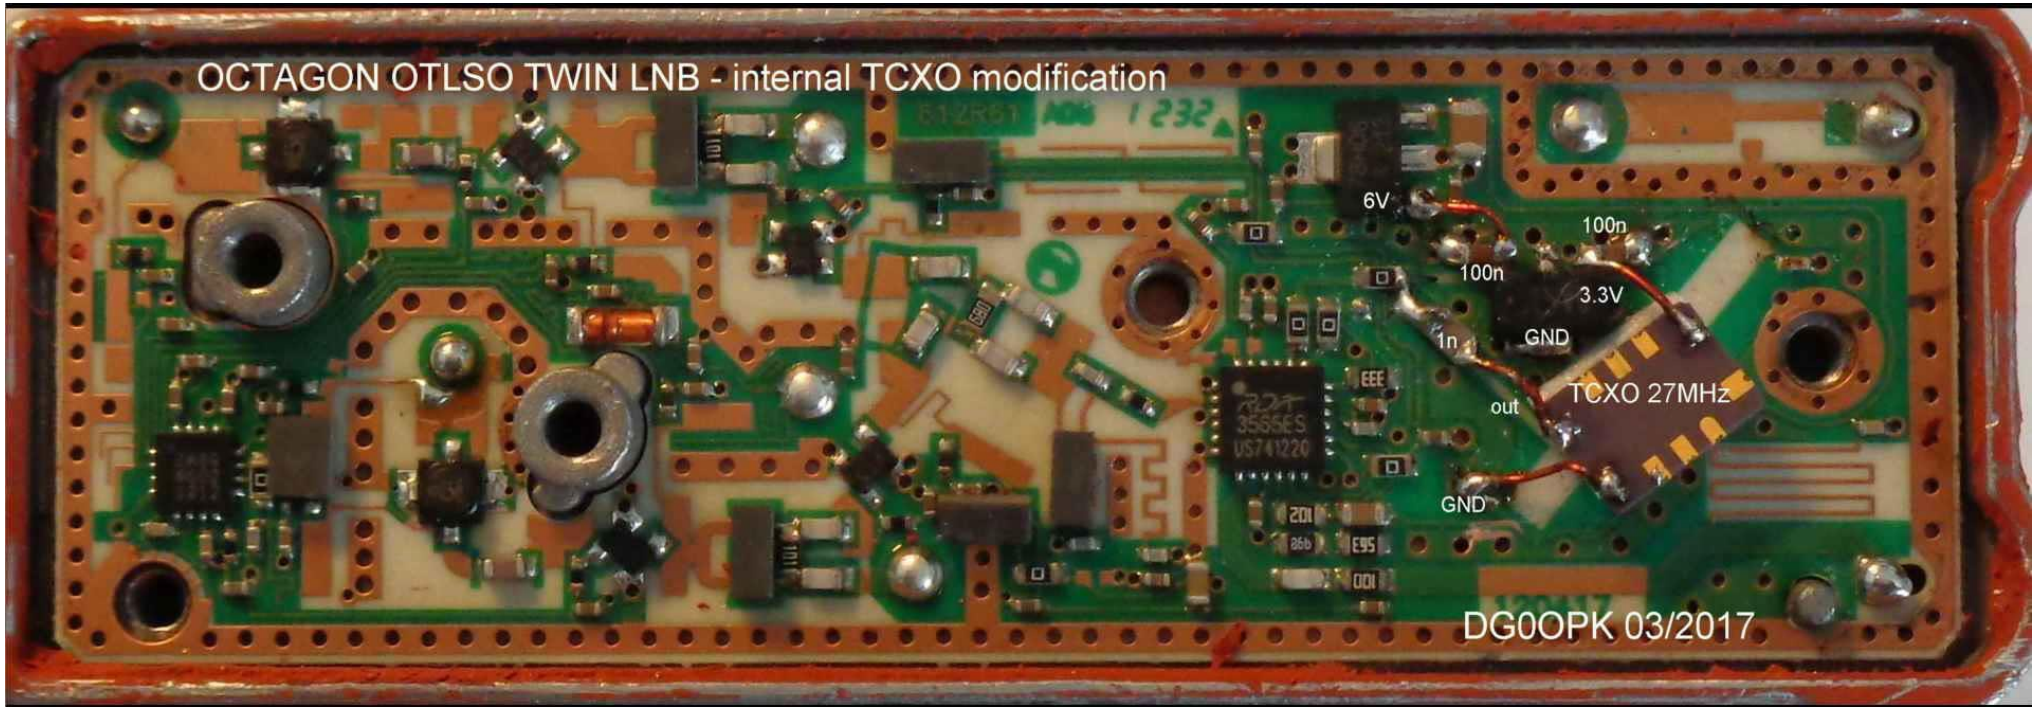
Octagon Optima LNB Twin Slim OTLSO with PLL

- Price: 9€ – 15€ (eBay, Amazon)
- new (!) RT320M from Rafael Micro
- 25 MHz Quarz instead of 27 MHz.
- 10 GHz selection filter behind preamps



Modified LNB with TCXO

- D75F analog controlled TCXO from Conner Winfield
- old version with RDA3560 PLL chip
- 1 ppm stability over temperature range 0-70 degrees
- http://www.dg0opk.darc.de/Octagon_LNB_mod_March2017.html
- Suggested for SSB and other narrow band modes



unmodified LNB

Frequency stability

Test Results from ZS6BTE
http://www.qsl.net/zs6bte/LNB%20Test%20Results.htm

- Standard 27 MHz LO crystal is cheaply and drifts heavily during warm-up.
- For the first 20 minutes the LNB is quite useless for narrow band working.
- After 40-45 minutes (tested indoors), the LO frequency stabilizes to 1 Hz at 27 MHz per 5 minutes or 360 Hz per 5 minutes at RF (9750 MHz).
- The LO at 9750 MHz ended up 36 kHz low, and reset to this same value subsequently (again indoors) when restarted.
- Once warmed up after 45 minutes it is thus very suitable for narrow-band working, provided time periods are not more than a minute or two.

unmodified LNB

Noise performance (Sensitivity) measurement (ZS6BTE)

IF freq	Y-factor$_{dB}$	T_{sys} k	NF_{sys} dB	Gain$_{dB}$ relative to IF 1200 MHz	Remarks
600	nearly dead			-30	10350 MHz
618	1.5	480	4.2	-24	10368 MHz
700	2.6	206	2.3	-10.3	10450 MHz
740	2.8	180	2.1	-9 P4-A Transponder	10490 MHz
800	3	158	1.9	0	10550 MHz
900	4.5	55	0.7	0	10650 MHz
1200	4.8	42	0.6	0	10950 MHz

$T_{sys} = [(T_0 - Y.T_{cold})/(Y-1)]$

$NF_{sys}\ dB = (T_{sys}/297 + 1)\ {}_{10}\log^{10}$

RF = IF freq + 9750 MHz

Conditions:
Ground/cold sky method used to obtain Y-factor
Ambient temp 297k (24°C)
Sky background - clear in target area
Antenna temp - taken as 70k, also best fit to expected result at 1200 MHz IF
Attenuator - Weinschel 9621 precision 1 dB steps monitored on Rx d.c. AGC output
Supply voltage - 12V from Thomson FTA sat receiver, LNB loop through used as IF, LO freq ~9.750 GHz
Rx - ICOM IC-R8500 in wide band 12 kHz AM mode
This LNB has a PLL 27 MHz crystal controlled LO

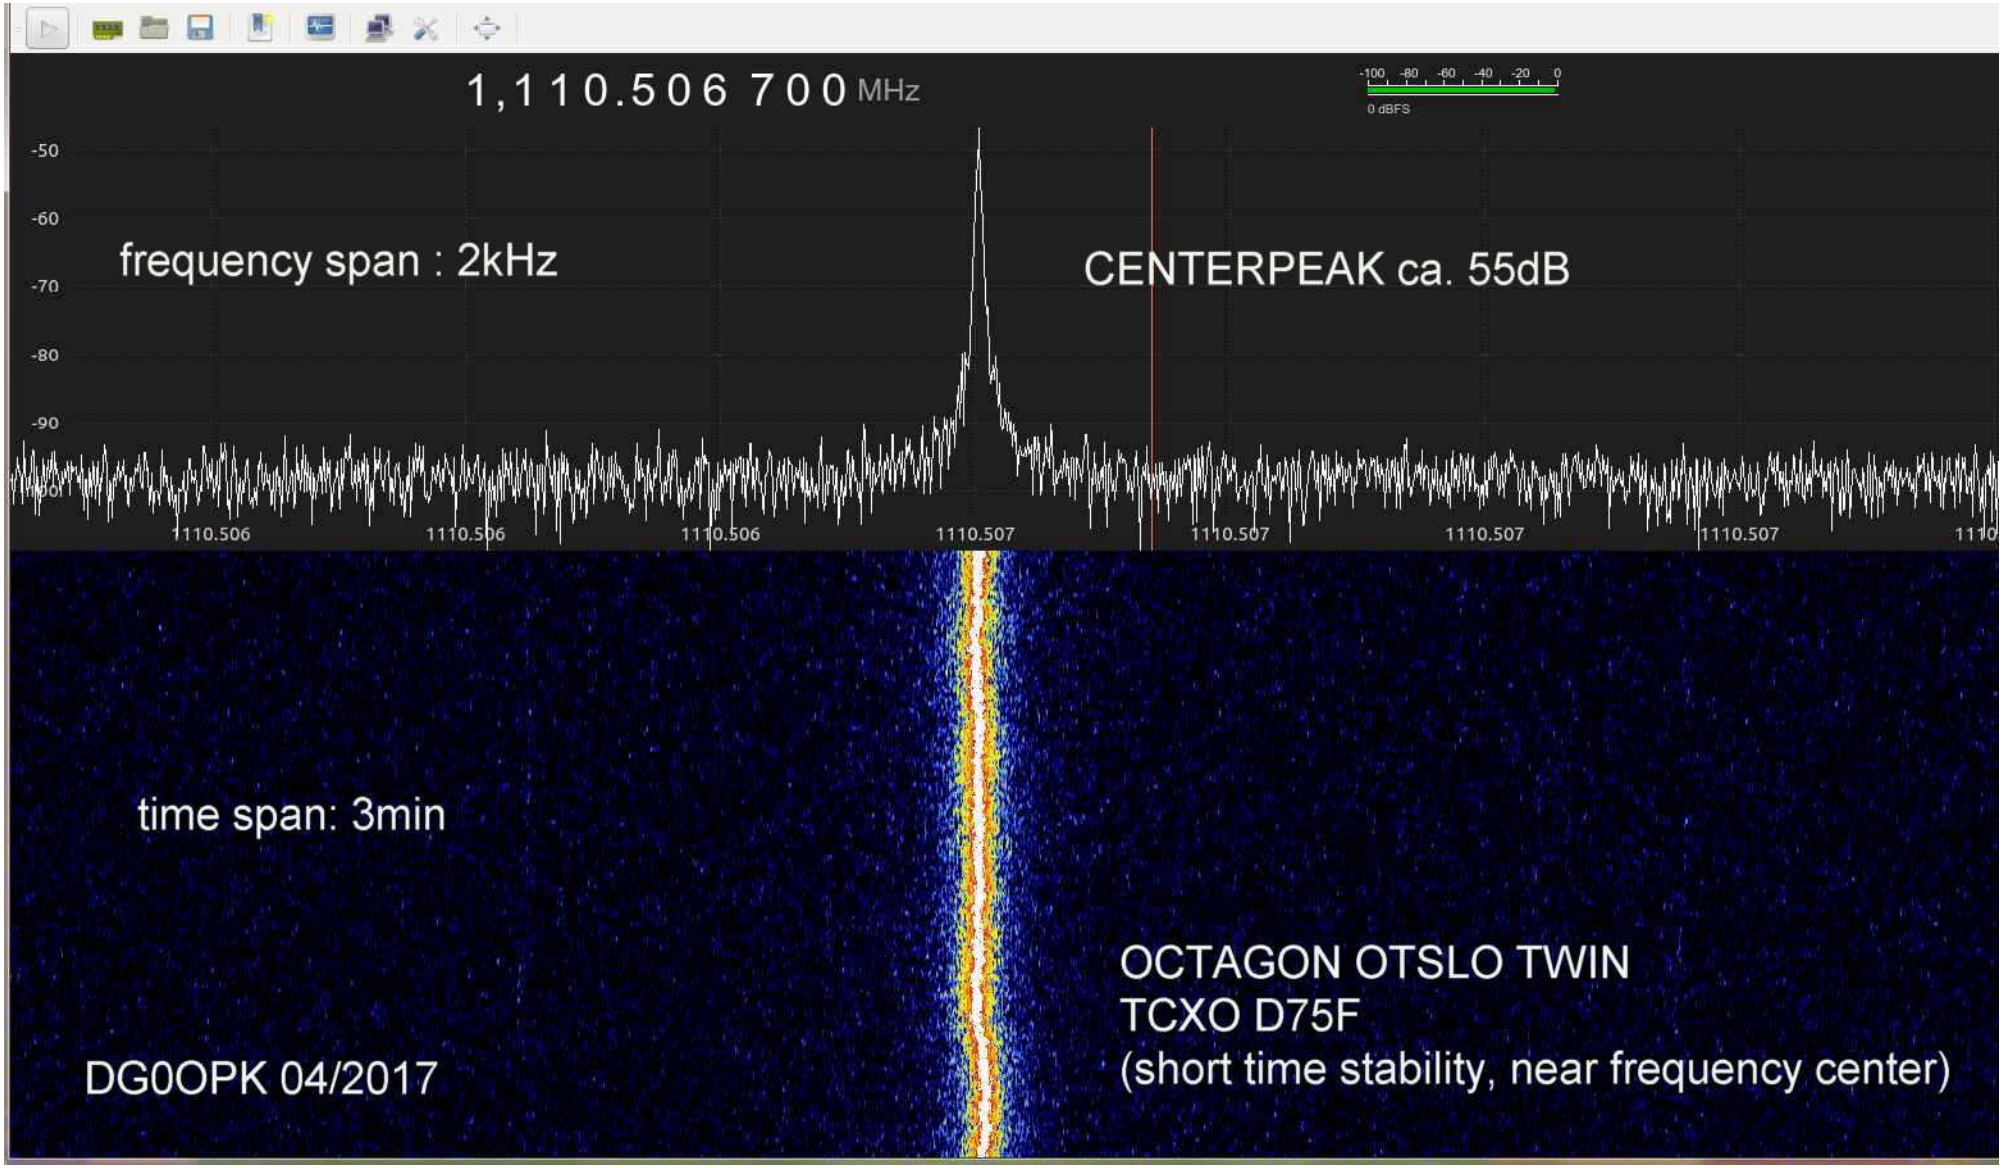
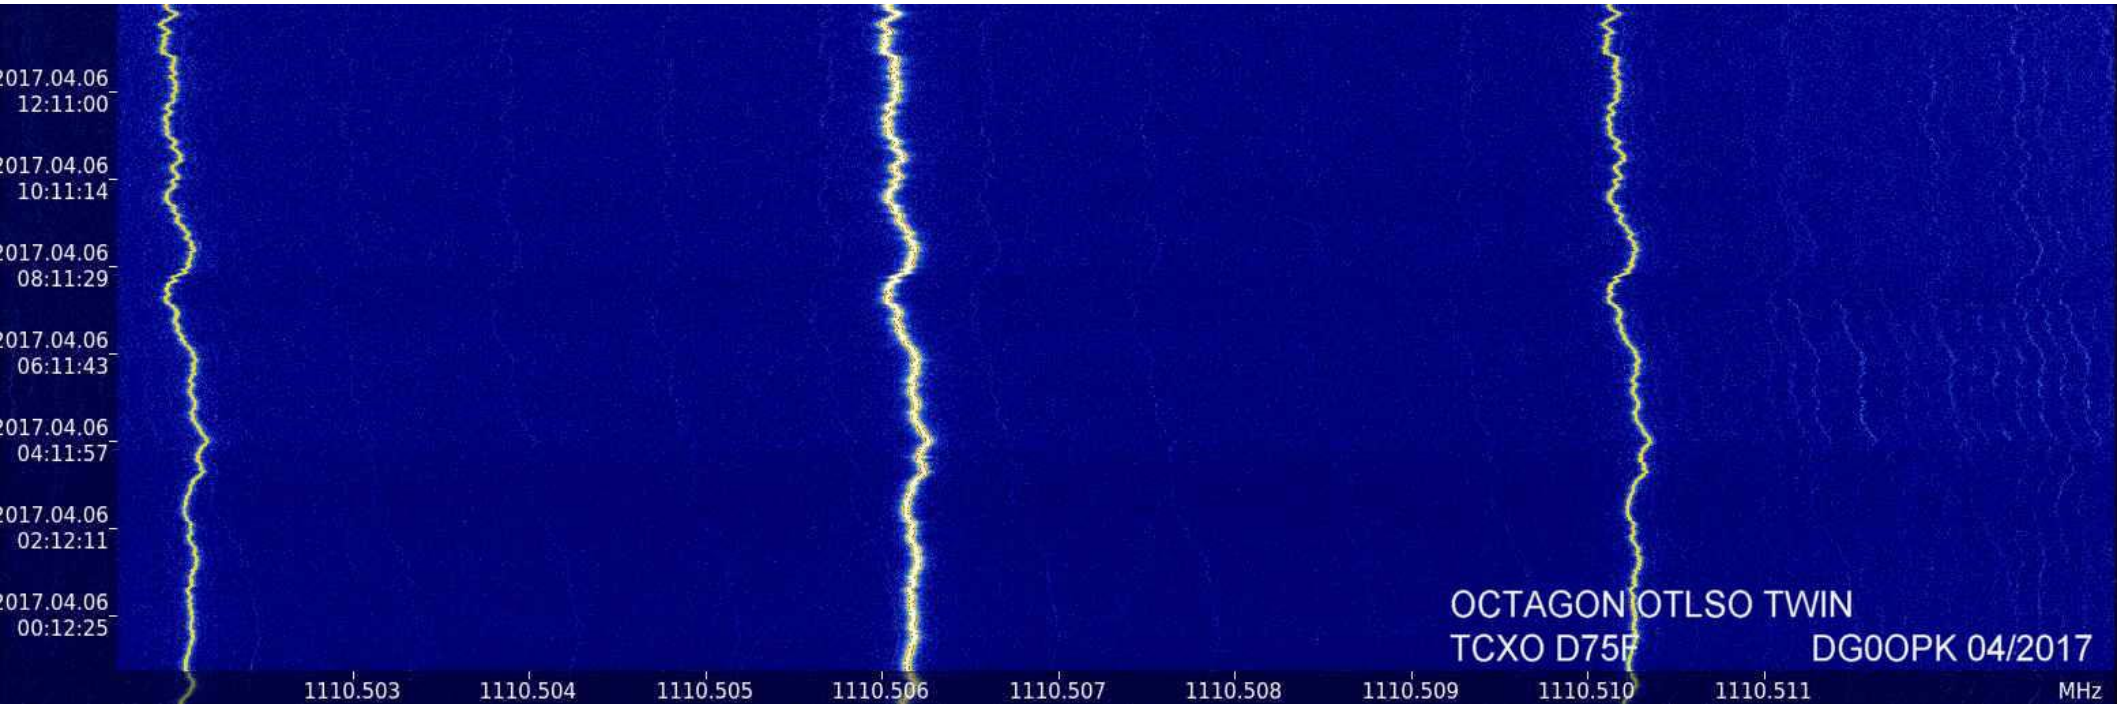
Satelliten für Kommunikation und Wissenschaft

Modified LNB with TCXO



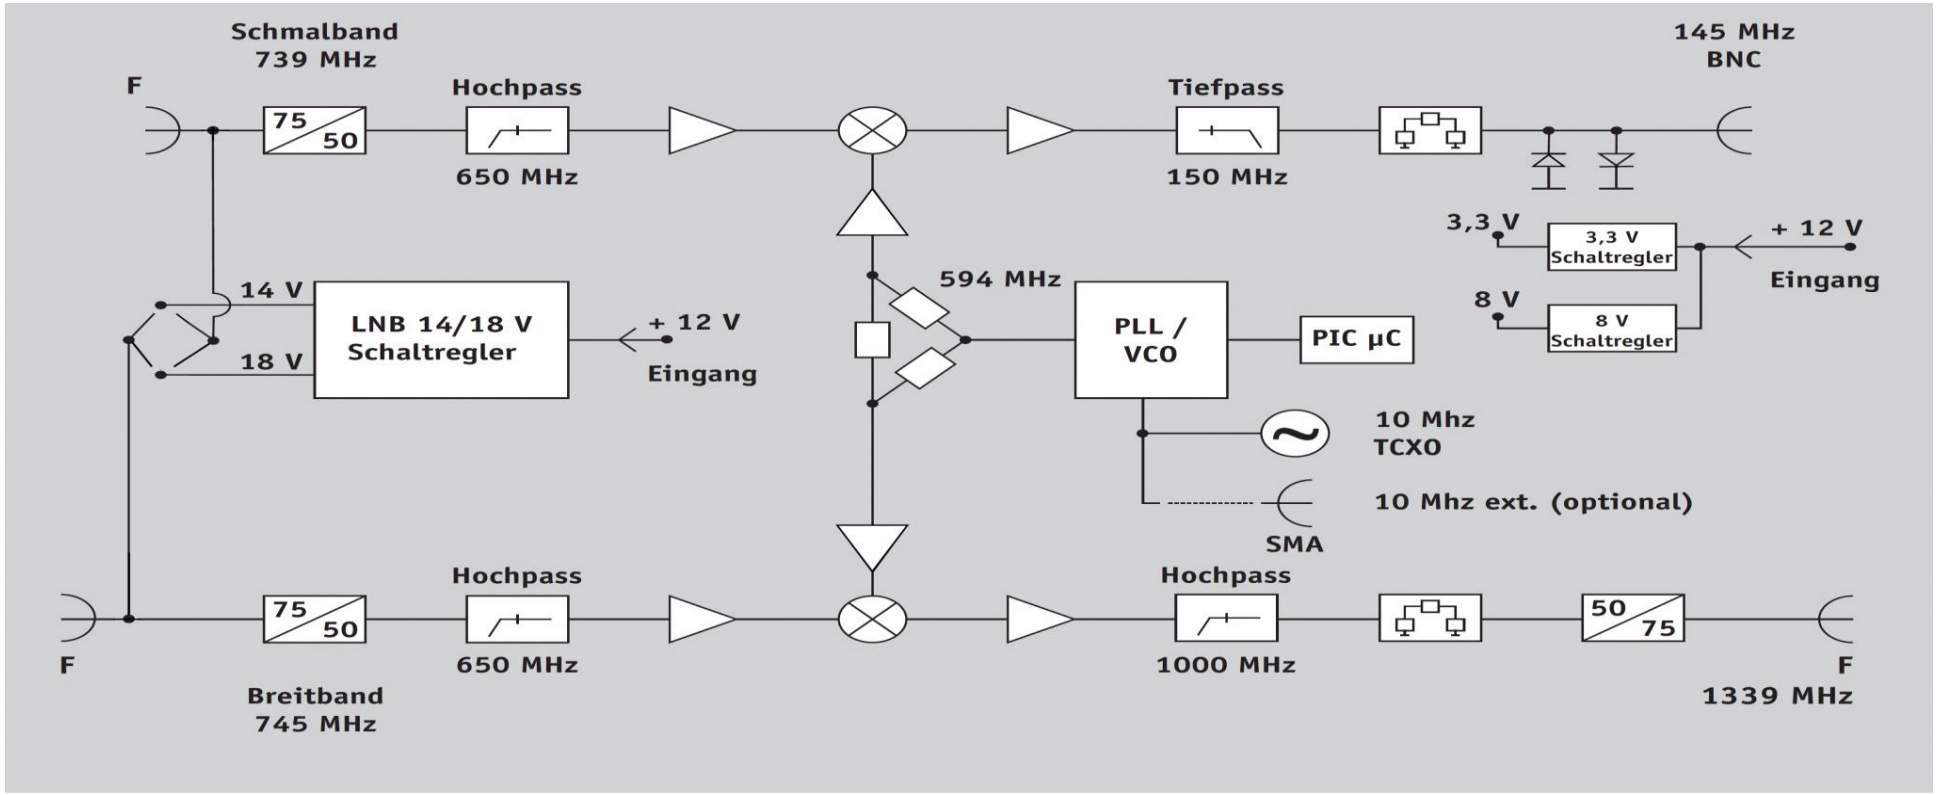
Modified LNB with TCXO

- 14 hours long term stability
- Octagon LNB with Conner Winfield D75F-TCXO



AMSAT P4-A Downconverter for SSB and DATV

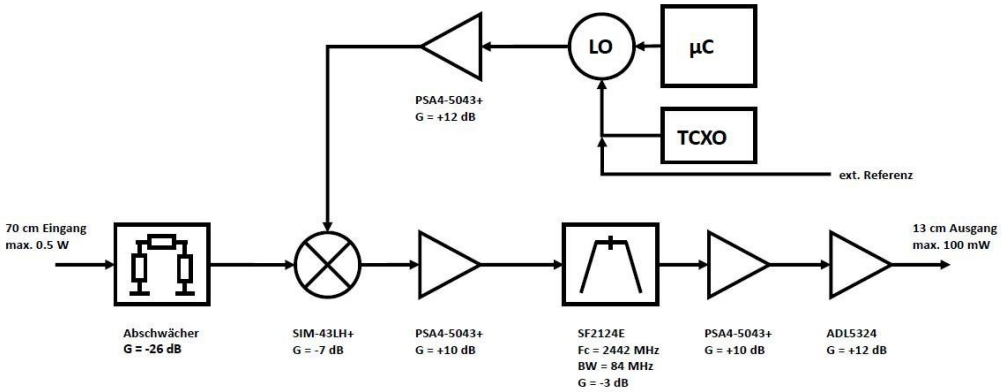
- **LO** at 594/595 MHz to shift **NB Downlink to 144/145 MHz**
- **Same LO** signal to **shift WB Downlink to ~1340 MHz** (inside Sat-Receiver IF band)
- Optional: external 10 MHz reference clock
- Includes amplifier for following Receivers
- F connector for LNB (with 14/18V supply) and Sat-Receiver
- BNC for VHF Receiver

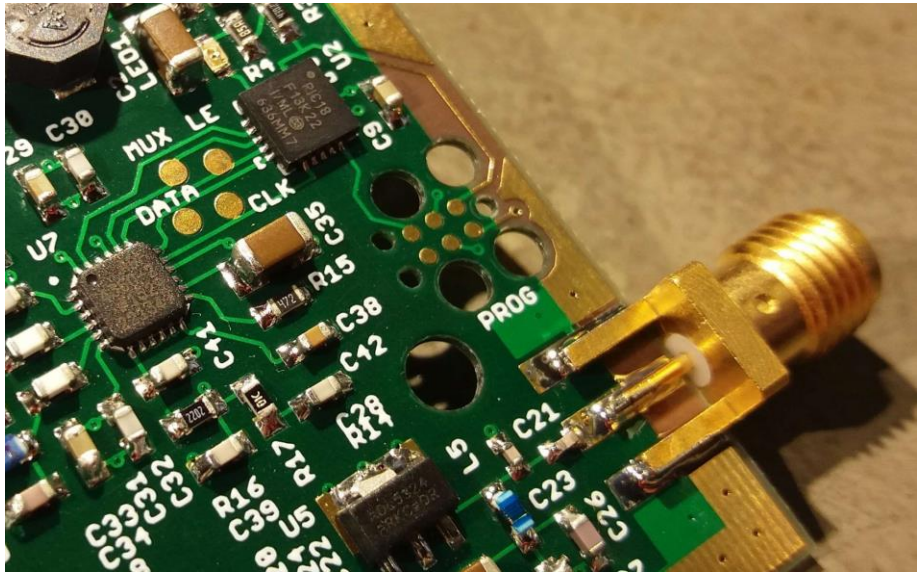


AMSAT P4-A Downconverter for SSB and DATV

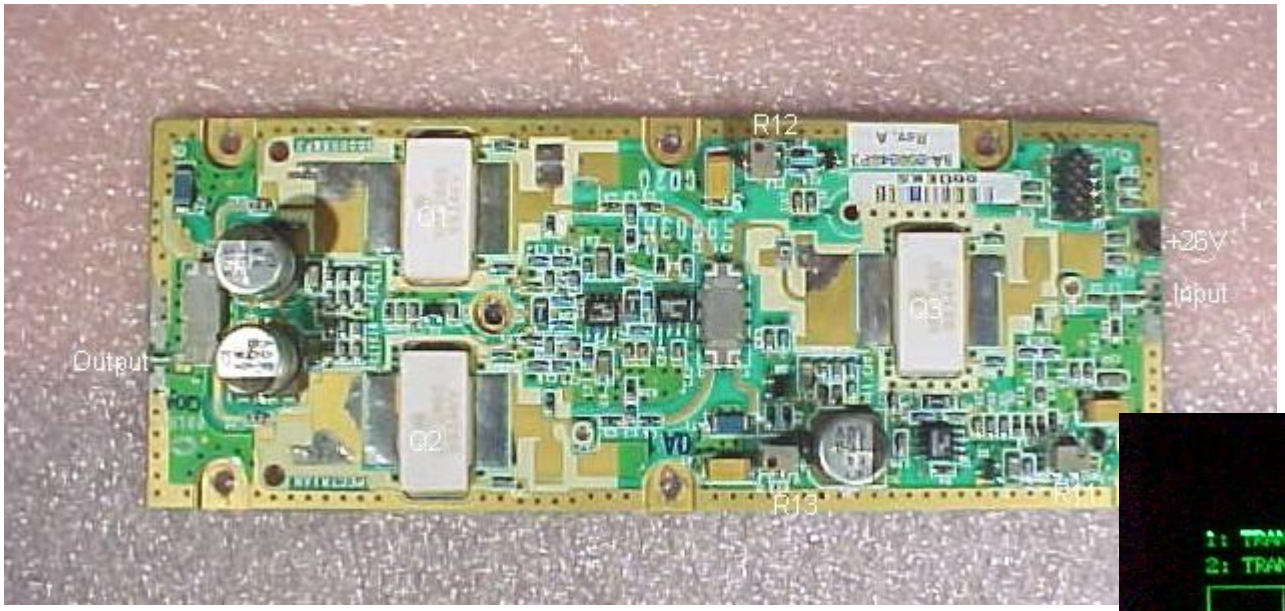
- Published in AMSAT-DL Journal No. 3, September 2017
- Kit will be available after launch of Es'hail-2 / AMSAT P4-A
- Please wait for further announcements from AMSAT-DL

AMSAT P4-A U/S-Upconterer





Surplus Power Amplifier 2.4 GHz



- http://www.ebay.com/bhp/spectrian
- 75W Spectrian Linear RF Amplifier Board
- 2.3-2.35 GHz, gain 18dB 24/26V
- 1.25 Watt Input Power

- Price: 99 $US on eBay

All-in-one solution (DB6NT)

OSCAR Phase 4 Down-Converter

X Low Noise down converter with feed horn
X 10.4 GHz -> 432 MHz
X No frequency drift due to TCXO
X mountable with standard LNB peg

All-in-one solution (DB6NT)

OSCAR Phase 4 UP-Converter

X 144 MHz -> 2.4 GHz
X 20 W output power
X stand-alone device
X fully remotely controllable
X numerous protection circuits
